SELECTED PUBLICATIONS

1. **Zhize Li**, Jian Li. **A Simple Proximal Stochastic Gradient Method for Nonsmooth Nonconvex Optimization**. In *32nd Conference on Neural Information Processing Systems (NeurIPS 2018)*. **Spotlight**.
(We propose a ProxSVRG+ algorithm and prove that it is the first stochastic algorithm (using constant minibatch, thus more practical) performing better than proximal gradient descent algorithm (using the whole dataset in each update), which solves an important open problem posed by Reddi et al. in NIPS 2016.)
2. **Zhize Li**, Jian Li, Hongwei Huo. **Optimal In-Place Suffix Sorting**. In *25th International Symposium on String Processing and Information Retrieval (SPIRE 2018)*. **Invited**.
A previous short version in *28th IEEE Data Compression Conference (DCC 2018)*.

(We give the first in-place suffix array (a fundamental data structure in string processing and data compression, as a space-efficient alternative to suffix tree) construction algorithm which is optimal both in time and space. In particular, our algorithm solves the important open problem posed by Franceschini and Muthukrishnan in ICALP 2007.)

3. Guanghui Lan, Zhize Li, Yi Zhou (alphabetical order). **A Unified Variance-Reduced Accelerated Gradient Method for Convex Optimization**. Submitted to **NeurIPS 2019**.
(We propose the first *optimal unified* algorithm for *convex optimization*, which is much better than the current state-of-the-art result given by Allen-Zhu in STOC 2017.)
4. **Zhize Li**. **SSRGD: Simple Stochastic Recursive Gradient Descent for Escaping Saddle Points**. Submitted to **NeurIPS 2019**.
(We propose a simple *near-optimal* algorithm for *nonconvex optimization*. We prove that its convergence result for finding an ϵ -first-order stationary point is $O(n + \sqrt{n}/\epsilon^2)$ which almost matches the lower bound $\Omega(\sqrt{n}/\epsilon^2)$. Since first-order stationary points can be saddle points, local maxima or local minima in nonconvex optimization, we further prove that our algorithm can escape saddle points and local maxima for finding a local minimum with a similar near-optimal convergence result. This work improves our previous two work in NeurIPS 2018 and COLT 2019.)
